### AMENDMENTS TO CLAIMS

This listing of claims replaces all prior versions, and listings, of claims in the application.

#### Listing of Claims

Claims 1-34 (Cancelled)

35. (Previously Presented) A device for tightening a strap around freight, comprising:
- a. a body capable of being rotated and comprising:
    - i. a means for holding a first end of a strap; and
    - ii. a first head positioned at a first end of the body for receiving a torsion arm; and
  - b. a clamp coupled to the body for holding a second end of the strap and comprising:
    - i. at least two clamp arms, wherein at least one arm is rotatably coupled to the clamp; and
    - ii. a cam rotatably coupled to the clamp for securing the at least two clamp arms at a second end.

36. (Original) The device of claim 35, wherein the means for holding a strap comprises a slot.

37. (Cancelled)

38. (Currently Amended) The device of claim ~~37~~ 35, further comprising a locking arm coupled to the cam for attaching the cam to the clamp arm.

Claims 39-40 (Cancelled)

Serial No. 10/676,579  
Filing Date: January 29, 2004  
Page 4 of 10*

41. (Previously Presented) The device of claim 35, wherein the torsion arm is capable of rotating the body.

42. (Previously Presented) The device of claim 35, wherein the torsion arm is adapted to connect to the first head.

43. (Previously Presented) The device of claim 35, wherein the torsion arm is capable of being removed from the first head.

44. (Previously Presented) The device of claim 35, wherein the torsion arm comprises at least one of the following: a wrench, a ratchet, a bar stock, or integrated portion of the body.

45. (Withdrawn) A method for tightening a strap for securing freight, comprising:  
providing a tightening device, comprising  
a body capable of being rotated and comprising:  
a means for holding a first end of a strap; and  
a first head positioned at a first end of the body for receiving a torsion arm; and  
a clamp coupled to the body for holding a second end of the strap and  
comprising:  
at least two clamp arms, wherein at least one arm is rotatably coupled to the  
clamp; and  
a cam rotatably coupled to the clamp for securing the at least two clamp arms at  
a second end;  
holding a first end of a strap with the means for holding a first end of a strap;  
securing a portion of the strap with the clamp; and  
rotating the body, thereby increasing tension on the strap.
